

Motorized Profil bending machine (PB 40-3)

500781080

Profil bending - SCANTOOL PB 40-3

The PB 40-3 is a Profi Bend section bending machine. We produce our profile bending machine range in Europe and deliver it directly from our stock.

This section bending machine has a shaft diameter of 40 mm and 3 driven rolls. It is easy to switch between working with two or three driven rolls via the gearshift on the side of the machine. Operation of this section bender is done by a foot pedal and with the pedals you choose the turning direction of the rolls.

Our PB 40-3 has a hand wheel to adjust the position of the upper / centre roll. The position of this upper roll can be read out on the scale next to it. Furthermore, our section bending machines can work in two positions: a vertical and a horizontal working position. Changing this working position is quick and easy, you just need to tilt the head (and not the whole structure).

A standard set of rollers is included for bending profiles and flat bars. However, we can also deliver roller sets for bending tubes and pipes as an option with this section bender. Further optional accessories are distance rollers, a yoke and a spiral bending device. Profi Bend machines are provided with storage compartments for its accessories as well.

Our Profi Bend profile bending machines are robust and reliable. We manufacture them with high quality materials and they fulfil the CE directives.
